Insert the ratio of cover needed. The value in each of the life cover and specified illness cover ratio fields must be between 0 and 1.

For example if you chose 1 in the life cover ratio field and 0.5 in the specified illness cover ratio field then MyQuotes will calculate the level of specified illness cover as half of the level of life cover.

**Price matching** will be based on benefits that would secure at the Irish Life book price. The price match cost will then be subtracted but the benefits will stay the same.

This means that we'll actually provide a price which could be lower than the budget specified.

Select any other fields needed and click **'Finish'**

**Note:** In the results screen, the quoted level of benefits based on the payment chosen will show in the cover details section.
